

White Ultra Bright LED Cluster 12v, 1.5w

This LED cluster bulb is ideal for use in solar & wind energy systems due to the exceptionally low 1.5w power draw.

Modern ultra bright LEDs give out a surprising amount of light, and these MR16 clusters are designed as a direct replacement for MR16 Halogen bulbs (of approx.10w).

These bulbs can be used as up-lights, down-lights, task-lights, mood or exterior lights. They are also great for lighting smaller areas such as stairs, cupboards and hallways. In caravans, motorhomes and boats they can make a massive difference to the lighting load.

These LED lamps are exceptionally reliable, have a estimated life of 50,000 hours and emit almost no heat.

Compact - diameter 50mm, depth 40mm, depth inc. pins 48mm.

MR16 / GX5.3 lamp fitting required.

Powered from 12vdc or 12vac.
