

GENERAL NOTES –

Replacement blades for the Aerogen 150 and Aerogen25 check with customers if their blade is marked R.O. if it is, a complete set of R.A. 5 blades must be purchased as we no longer stock the old type blades.  
 Replacement blades for the Aero4gen and Aero6gen – Customers may quote a blade weight (grams) it may not be possible to supply the exact weight, check with production the current batch weight they have in stock they must be within (2–3 grams of the customers old blade weight)  
 I would always recommend the customers purchase two blades, which they must install directly opposite each other in the hub.

If a customers describes a blade 75cm (2ft 5.5 inches) long with a tip 10cm (4") it is a wooden blade for an Aero5gen or Aero8gen–F. These blades are no longer available.

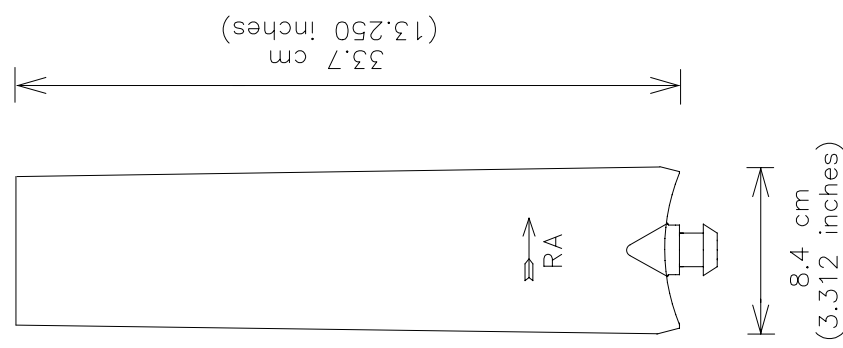

BLADE COLOUR – WHITE  
 LVM PT. NO. BLADE 518
